1 General informations

1.1 Informations for your safety

We are pleased that you have decided for a high-class KIESELMANN GmbH product. With correct application and adequate maintenance, our products provide long time and reliable operation.

Before installation and initiation, please carefully read this instruction manual and the security advices contained in it. This guarantees reliable and safe operation of this product and your plant respectively. Please note that an incorrect application of the process components may lead to great material damages and personal injury.

In case of damages caused by non observance of this instruction manual, incorrect initiation, handling or external interference, guarantee and warranty will lapse!

Our products are produced, mounted and tested with high diligence. However, if there is still a reason for complaint, we will naturally try to give you entire satisfaction within the scope of our warranty. We will be at your disposal also after expiration of the warranty. In addition, you will also find all necessary instructions and spare part data for maintenance in this instruction manual. If you don't want to carry out the maintenance by yourself, our KIESELMANN GmbH - service team will naturally be at your disposal.

1.2 Marking of security instructions

Hints are available in the chapter "safety instructions" or directly before the respective operation instruction. The hints are highlighted with a danger symbol and a signal word. Texts beside these symbols have to be read and adhered to by all means. Please continue with the text and with the handling at the valve only afterwards.

Symbol	Signal word	Meaning
	DANGER	Imminent danger which will result severe personal injury or death.
	WARNING	Imminent danger which may result severe personal injury or death.
	CAUTION	Dangerous situation which may cause slight personal injury or material damages.
	NOTICE	An harmful situation which may result in damages of the product itself or of adjacent vicinity.
	INFORMATION	Marks application hints and other information which is particularly useful.

1.3 General designated use

The fitting is designed exclusively for the purposes described below. Using the fitting for purposes other than those mentioned is considered contrary to its designated use. KIESELMANN GmbH cannot be held liable for any damage resulting from such use. The risk of such misuse lies entirely with the user. The prerequisite for the reliable and safe operation of the fitting is proper transportation and storage as well as competent installation and assembly. Operating the fitting within the limits of its designated use also involves observing the operating, inspection and maintenance instructions.

1.4 Personnel

Personnel entrusted with the operation and maintenance of the tank safety system must have the suitable qualification to carry out their tasks. They must be informed about possible dangers and must understand and observe the safety instructions given in the relevant manual. Only allow qualified personnel to make electrical connections.

1.5 Modifications, spare parts, accessories

Unauthorized modifications, additions or conversions which affect the safety of the fitting are not permitted. Safety devices must not be bypassed, removed or made inactive. Only use original spare parts and accessories recommended by the manufacturer.

1.6 General instructions

The user is obliged to operate the fitting only when it is in good working order. In addition to the instructions given in the operating manual, please observe the relevant accident prevention regulations, generally accepted safety regulations, regulations effective in the country of installation, working and safety instructions effective in the user's plant.

2 Safety instructions

2.1 Intended use

Tank outlet valves are used as manually or pneumatically controlled Shut-off valves in units of the beverage and food industry, the pharmacy, the biotechnology as well as the chemical industry.

2.2 General notes

NOTICE - observe the operating instructions

To avoid danger and damage, the fitting must be used in accordance with the safety instructions and technical data contained in the operating instructions.

NOTICE

All data are in line with the current state of development. Subject to change as a result of technical progress.

2.3 General safety instructions

⚠ WARNING

Risk of injury by moving parts

Do not grab into the valve when the actuator is pressurized. Limbs can be crushing or amputating.

- Remove the control air line before dismantling.
- Ensure that the actuator is unpressurized.

⚠ WARNING

Risk of injury by outflowing medium

Dismantling the valve or valve assemblies from the plant can cause injuries.

- Medias flowing through the leakage drain outlet are to be drained off without splashing into a discharge arrangement.
- Carry the disassembling only if when the plant has been rendered pressure-less and free of liquid and gas.

⚠ WARNING

Risk of injury by pre-stressed pressure spring.

The actuator is spring-loaded. When disassembling the actuator, components that jump out may cause injuries.

- For dismantling please observe the separate assembly instructions.
- We recommend having the manufacturer do the maintenance work required for the actuation.

⚠ CAUTION

When mounting the clamps, the max. torque must not be exceeded.

(see technical data)

⚠ CAUTION

To avoid air leaking, only use pneumatic connection parts that have an O-ring seal facing the even surface.

**⚠ CAUTION**

Before starting the system, the entire pipeline system must be thoroughly cleaned.

**⚠ CAUTION**

Steps should be taken to ensure that no external forces are exerted on the fitting.

3 Specification

3.1 Modular system

KI-Top control head	feedback unit
	
Stainless steel hood	Transparent hood
Feedback unit with finger guard (E)	
Valve insert	
	
PTFE / k-flex PTFE / EPDM	
Valve housing	
S	S - S
	

3.2 Valve design

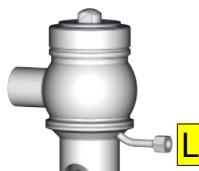

GEMBRA Aseptic - Tank Outlet Valve

Angle valve S	T-valve S-S
	

4 Function and operation

4.1 Description of function

Leakage detection

Any leaks occurring due to damaged valve plate seals are drained to the exterior without pressure via the leakage discharge (L).

Valve function:	<ul style="list-style-type: none"> • Shut off fluid media in tanks and vessels.
Actuation:	<ul style="list-style-type: none"> • pneumatic operation by a lift drive (air/spring)
Activation:	<ul style="list-style-type: none"> • Pneumatic via 3/2-way solenoid valves (See "Pneumatic Valve Activation")

Description of function - Lift actuator

Normally closed (NC) Basic position: Valve close	
pneum. operated	→ opens the valve
undivided pneum. operated	→ spring force closes the valve

4.2 Control system and position indicator

Feedback unit -optional-

Optionally, modular valve control head systems can be installed to the actuator for reading and actuating valve positions. The standard version is a closed system with SPS or ASI-bus switch-on electronics, and integrated 3/2-way solenoid valves. For tough operating conditions we recommend employing a high-grade steel cover.

Feedback unit with finger guard -optional-

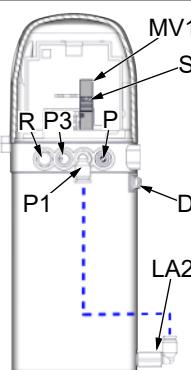

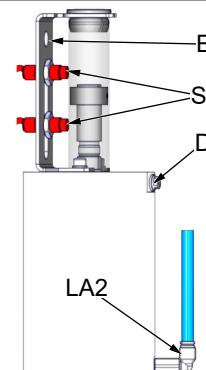

For the acquisition of the valve positions over inductive initiators (Sensors), a feedback unit is mounted on the actuation. The enquiry takes place over the position of the piston rod.

4.3 Basic Position of Valve

Actuator type: normal closed (NC)		
	Basic positon: Valve closed - spring closed: Line A - B closed	Valve open - air open: Line A - B open
Angle valve		
T-valve		

4.4 Pneumatic valve activation

Antriebsart: normal closed (NC)

Valve functions	Pneum. activation via control head with solenoid valves	Pneum. activation via external solenoid valves
valve "OPEN"	Control supply air P - MV1 - P1/LA2	Control supply air ext.MV1 - LA2
valve "CLOSE"	Ventilation P2/LA2 - MV1 - R valve is closing by spring	Ventilation LA2- ext.MV1 valve is closing by spring
	Control head with solenoid valve	external pneum. activation
MV = solenoid valve R = de-aeration, sound absorber P = compressed-air inlet (control unit) LA = air supply S = Slide switch, manual operation of solenoid valve Si = Sensors M12x1 E = mounting kit for feedback unit		

5 Commissioning, service and maintenance

5.1 Commissioning

5.1.1 Installation instructions

Fitting position

The valve must be installed vertically with the actuator at the bottom. Liquid must be able to flow freely from the valve housing and the leakage outlet (L).

5.1.2 General welding guidelines

Sealing elements integrated in weld components must generally be removed prior to welding. To prevent damage, welding should be undertaken by certified personnel (EN ISO 9606-1). Use the TIG (Tungsten Inert Gas) welding process.

⚠ CAUTION

Damage and injuries due to high temperature supply

To avoid a distortion of the components, all welding parts must be welded to stress-relieved. Allow all components to cool before assembling.

NOTICE

Damage due to impurities

Impurities can cause damage to the seals and seals area.

Clean inside areas prior to assembly.

5.1.3 ATEX - Guidelines

For valves or plants/installations that are operated in the ATEX area, sufficient bonding (grounding) must be ensured (see valid ATEX Guidelines EG).

5.2 Cleaning

Cleaning

Ideally, cleaning is carried out with pipe system cleaning when the valve is open.

5.3 Service

RECOMMENDATION

Replacement of seals

To achieve optimal maintenance cycles, the following points must be observed!

- When replacement of seals, all product-contacting seals should be replaced.
- Only original spare parts may be installed.

Maintenance interval

The maintenance intervals depend on the operating conditions "temperature, temperature-intervals, medium, cleaning medium, pressure and opening frequency". We recommend replacing the seals 1-year cycle. The user, however should establish appropriate maintenance intervals according to the condition of the seals.

Lubricant recommendation

	EPDM; HNBR; NBR; FKM; k-flex	- Klüber Paraliq GTE703*
	Silicone	- Klüber Sintheso pro AA2*
	Thread	- Interflon Food*
*) It is only permitted to use approved lubricants, if the respective fitting is used for the production of food or drink. Please observe the relevant safety data sheets of the manufacturers of lubricants.		

6 Technical data

Model	Aseptic Single seat-tank outlet valve		
Size	DN40 - DN80 OD 1½" - OD 3"		
Connection type	• weld-on end DIN EN 10357		
Operating pressure	DN 40- DN 65	max. 10 bar	
	OD 1½" - OD 2½"	max. 10 bar	
	DN 80 / OD 3"	max. 8 bar	
Cleaning pressure	3 bar		
Pressure resistance	30 bar		
Leakage rate	A (DIN EN 12266-1)		
Control air pressure	5,5 - 8,0 bar		
Quality of control air:	ISO 8573-1 : 2001 quality class 3		
Temperature range	Ambient temperature: (air)	+4°C to +45°C	
	Operating temperature: (medium dependent)	+4°C to +95°C	
	Sterilisation temperature: (SIP 30 min)	k-flex/PTFE +140°C (SIP 30 min)	EPDM/PTFE +140°C (SIP 30 min)
Material (in contact with product)	Stainless steel: Surface: Sealing material:	1.4404 / AISI 316L Ra < 0,8µm mat finish • EPDM • HNBR • k-flex

NOTICE

All threaded joint have right-hand thread.

Dismantle pneumatic and electrical connections. Unscrew fittings for CIP, discharge and feed lines.

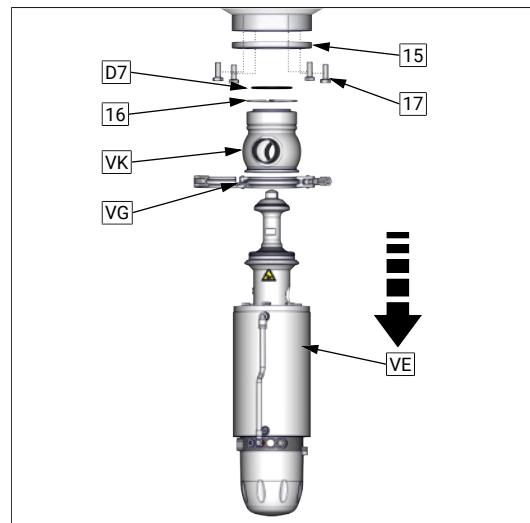

7.1.1 Assembly valve insert VE

- air open- spring close (NC)
- air open - air close (DA)
 - Remove the hood (H) from control head.
 - Connect control air to the air connection (P) and lift the piston (2) by actuating the slide switch (S).
 - Unscrew and remove the clamp coupling (VK).
 - Remove the completely valve insert (VE) from the housing (VG).
 - Disconnect the air supply (P), the valve moves to the basic position.
 - To prevent damage to the control head, re-install the hood (H).

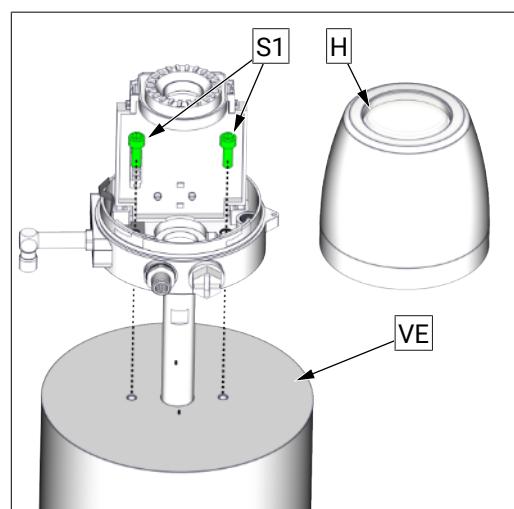

- air close- spring open (NO)

- Unscrew and remove the clamp coupling (VK).
- Remove the completely valve insert (VE) from the housing (VG).

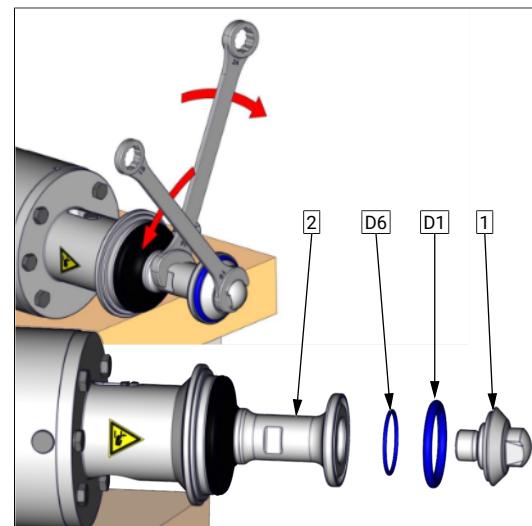

7.1.2 Replacement wear parts

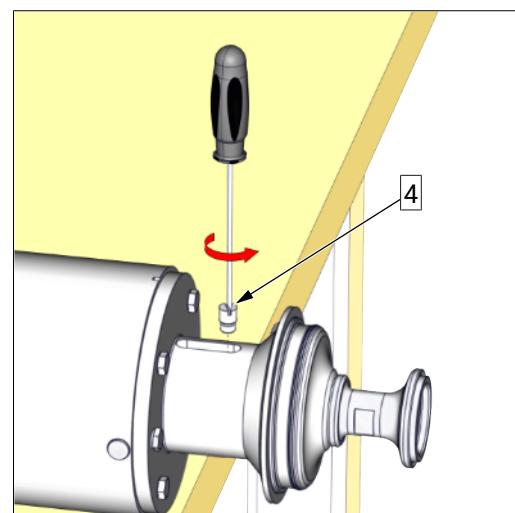

- Remove the hood (H) from control head (bayonet lock).
- Unscrew the screws (S1).
- Remove the control head.

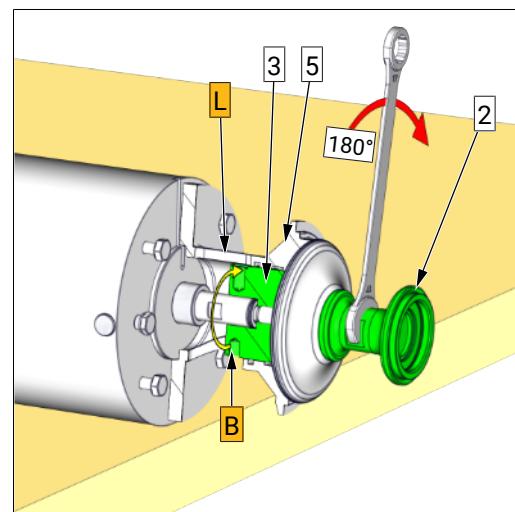

- Unscrew the piston plate (1), hold it against with a fork wrench at the piston (2).
- Remove seal (D1).

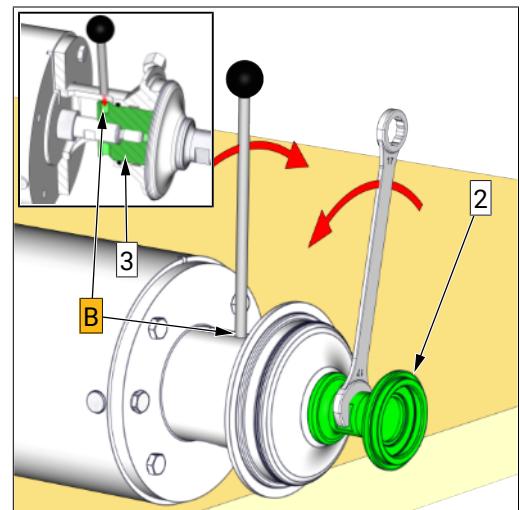

- Unscrew the stud bolt (4).

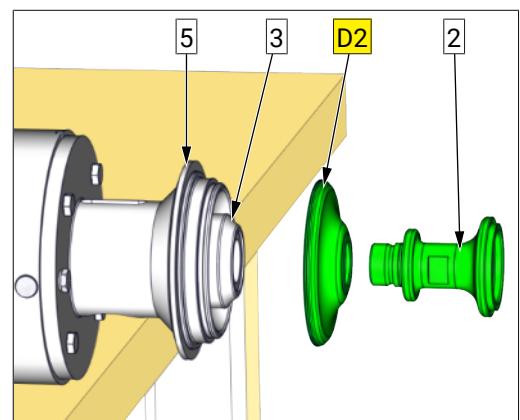

- Turn the piston (2) 180 ° so that the hole (B) is in the slot (L) of the lantern (5).

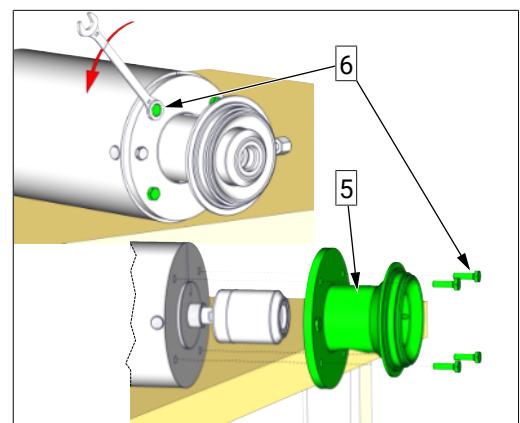

- Insert a round rod Ø8 into the hole (B) and unscrew the piston (2) with a fork wrench from the upper piston (3).

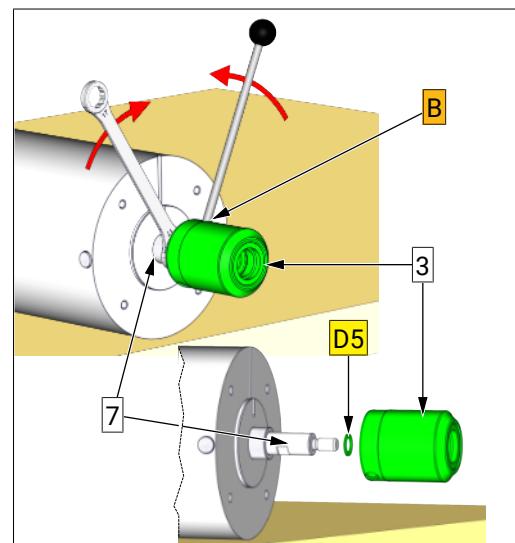

- Dismount the membrane (D2).

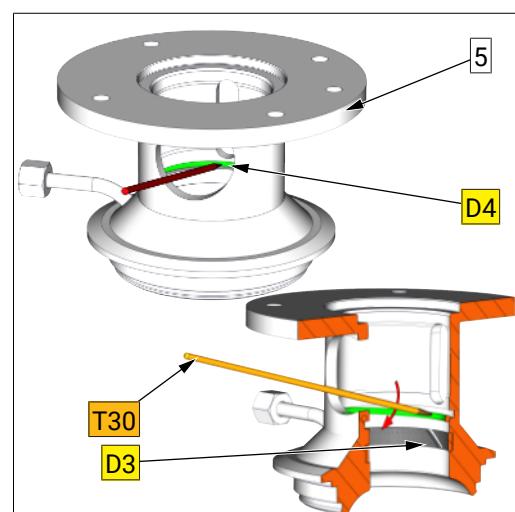

- Unscrew the screws (6).
- Remove lantern (5).

- Unscrew piston (3) from piston rod (7).
- Remove screw locking (D5).

- Pierce the O-ring (D4) with a sharp tool and carefully remove it from the groove.
- Check plain bearing (D3) for wear and replace if necessary.

7.2 Assembly

- Before installation, thoroughly clean and slightly lubricate mounting areas and running surfaces.
- Assemble in reverse order.

NOTICE

Alternately press and roll the O-rings into the groove with round body.

Performance test

- Check the function according to the specified performance data in the operating state.

7.2.1 Mounting clamp coupling (VK)

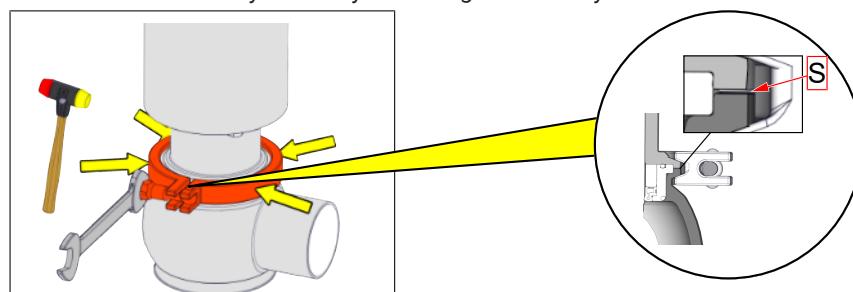

NOTICE

During assembly, the following points must be observed!

Carefully fit in the complete valve insert into the casing. When fitting the valve insert and running surfaces onto the piston, do not damage.

➤ **Mounting clamp coupling**

- For mounting the clamp coupling, please note that it continuously fits from locking to the inclinations of the casing and the lantern/casing bottom.
- The centring of the retaining clamp during tightening can be accomplished with a slight beat (please use a soft-head hammer) on the extent of the retaining clamp.
- When tightening the clamp coupling, please pay attention to the turning moment and the gap size 'S' ($\leq 0,4\text{mm}$) between the components.
- Check valve functions by manually activating the 3/2-way solenoid valves after assembly!

Torques

	ND Inch	25 1	40 1½	50 2	65 2½	80 3	100 4
Clamp coupling (Nm):		15	15	15	25	25	55

7.2.2 Mounting diaphragm (D2) and valve insert (VE)

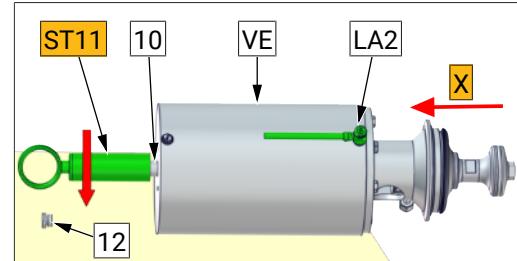

7.2.2.1 Adjusting the mounting position

Adjusting the installation position with mounting tool

ST11		Mounting wrench A Mounting wrench B	DN 40 - 65 DN 80	5836000065-000 5836000080-000
------	---	--	---------------------	----------------------------------

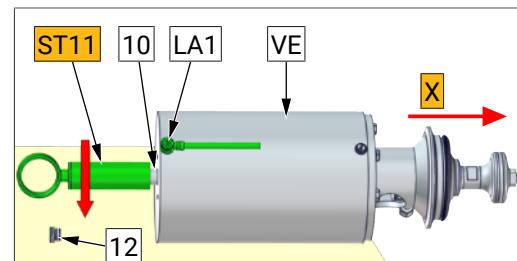

Type of actuator: air open- spring close (NC)

- Unscrew cap (12).
- Connect compressed air to the air supply (LA2). The piston moves toward (X).
- Screw the mounting wrench (ST11) onto the spindle (10) until stop.
- Disconnect the compressed air from the air supply (LA2). The piston moves to the mounting position.

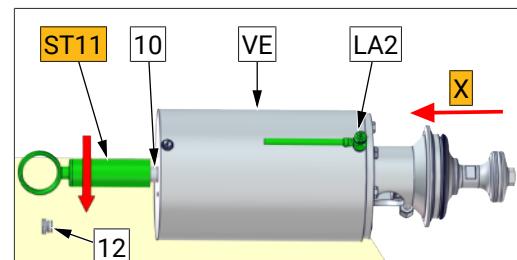

Type of actuator: air close - spring open (NO)

- Unscrew cap (12).
- Screw the mounting wrench (ST11) onto the spindle (10) until stop.
- Connect compressed air to the air supply (LA1).
- The piston moves to the mounting position.

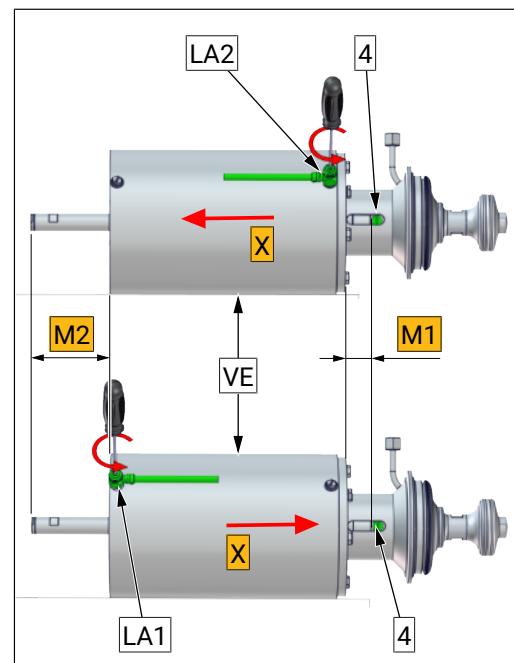

Type of actuator: air open - air close (DA)

- Unscrew cap (12).
- Screw the mounting wrench (ST11) onto the spindle (10) until stop.
- Connect compressed air to the air supply (LA2).
- The piston moves to the mounting position.

Adjusting the installation position without mounting tool

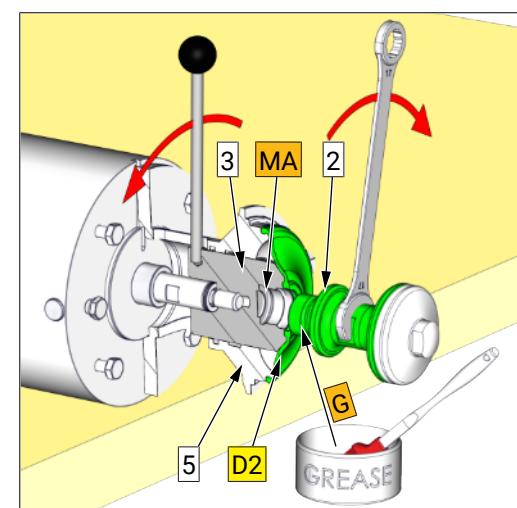

- Unscrew cap (12).
- Connect compressed air at the throttle valve (LA1 NO) or (LA2 NA / NC) Depending on the actuator type the piston moves on or off.
- Disconnect the compressed air (LA1 or LA2).
- The piston remain in the position. Position a calliper on the adjustment dimension M1 or M2.
- Slowly open the throttle valve at so that the piston drives out or in.
- Close the throttle again at the position M1 respectively M2. (If an control head is assembled, the adjustment dimension M1 is measured between the actuator and the pin (4)).

	Bore	Adjustment dimension for mounting position	
		M1	M2
DN40	ø7	18.5	107
DN40	ø7	18.5	107
DN50	ø7	18.5	107
DN65	ø8	29	104
DN80	ø8	35	98

7.2.2.2 Mounting Membrane (D2)

- Screw the pre-assembled piston (2) onto the piston (3) to the metal stop (MA).
- Slightly grease the threaded connection (G).

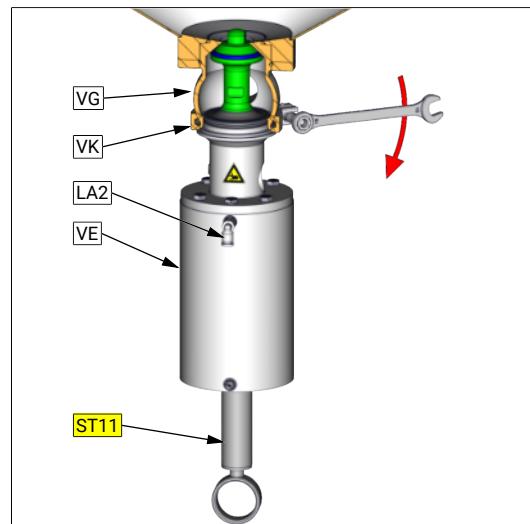

- Adjust the piston to the mounting position. Proceed as described in section "Adjusting the mounting position".
In this valve position the diaphragm (D2) is in its basic position and is optimally compressed between lantern (5) and housing (VG).
- Clip the diaphragm (D2) carefully in the lantern (5).

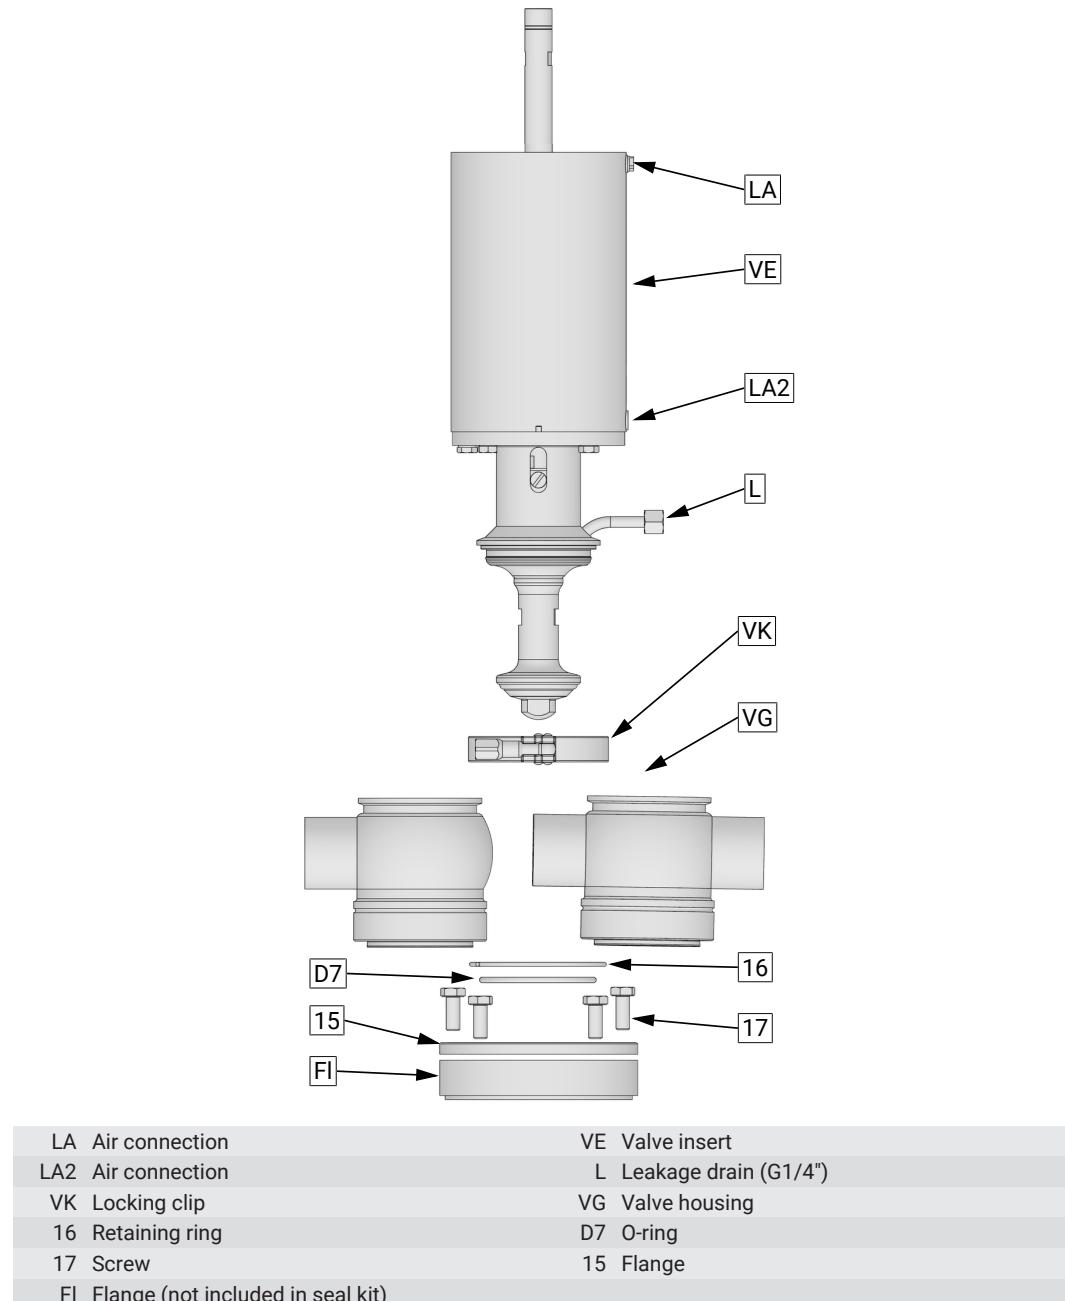

7.2.2.3 Mounting the valve insert (VE)

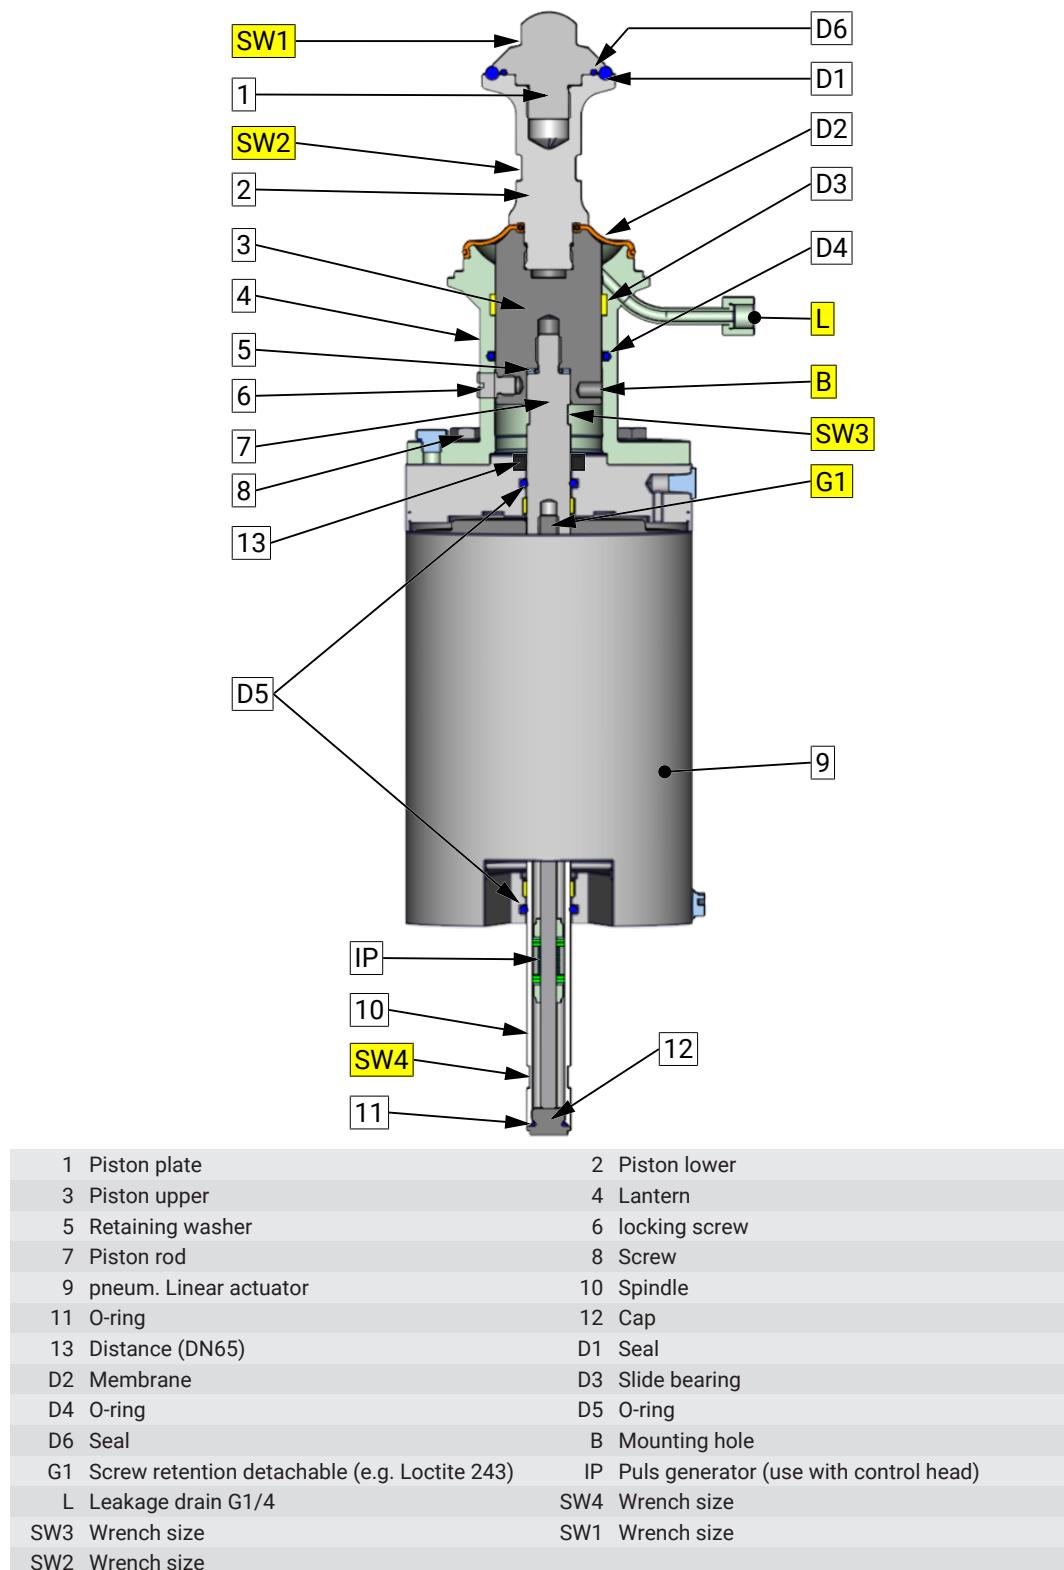

- Adjust the piston to the mounting position. Proceed as described in section „Adjusting the mounting position“.
- Install carefully and without cant the valve insert (VE) into the housing (VG).
- Mount the clamp coupling (VK). Proceed as described in section „Mounting clamp coupling (VK) [► 19]“.
- Unscrew the mounting wrench or slowly open the throttle valve (LA2). The piston moves to the basic position.
- Check valve functions.

10 Classification

10.1 Structure of Order Number

Product name	0	1	2	3
Type: 5850 GEMBRA Aseptic-Tank Outlet Valve	5	8	5	0

Valve size DN / OD								
DN	4	5	6		OD	4	5	6
DN 25	0	2	5		OD 1 "	0	2	6
DN 40	0	4	0		OD 1 1/2"	0	3	8
DN 50	0	5	0		OD 2 "	0	5	1
DN 65	0	6	5		OD 2 1/2"	0	6	4
DN 80	0	8	0		OD 3 "	0	7	6

Design modification & Housing type								
Type	Housing			7	8	9	10	11
5850 xxx 000-xxxx	L-form S-S			0	0	0	-	-
5850 xxx 200-xxxx	T-form SS-S			2	0	0	-	-
5850 xxx 020-xxxx (Valve insert)	-			0	2	0	-	-

Separator								
KIESELMANN	11	12	13	14	15	16	17	18
-	-	-	-	-	-	-	-	-

Control system and position indicator								
Control head SPS (old version)	11	12	13	14	15	16	17	18
Control head ASi-Bus (old version)	5	x	x	-	-	-	-	-
Control head KI-Top SPS	6	x	x	-	-	-	-	-
Control head KI-Top ASi-Bus	K	5	x	x	-	-	-	-

Feedback unit								
Feedback unit with finger guard (5630 005 025-000)	11	12	13	14	15	16	17	18
-	7	5	0	-	-	-	-	-

External surface								
Valve without control system, External surface, AISI304, E-polished	11	12	13	14	15	16	17	18
Valve without control system, External surface, AISI316L, E-polished	0	2	1	-	-	-	-	-

<u>Product name</u>	<u>Function</u>
pneum. Lift actuators	Stroke movement
pneum. Rotary actuators	Rotary movement
Ball valves	Media cutoff
Butterfly valves	Media cutoff
Single seat valves	Media cutoff
Flow control valves	Control of liquefied media
Throttle valve	Control of liquefied media
Overflow valve	Definition of fluid pressure
Double seat valve	Media separation
Bellow valves	Sampling of liquids
Sampling valves	Sampling of liquids
Two way valves	Media cutoff
Tankdome fitting	Prevention of overpressure and vacuum, Tank cleaning
Safety valve	Prevention of overpressure

The manufacturer hereby states that the above product is considered as an incomplete machine in the sense defined in the Directive 2006/42/EC on Machinery. The above product is exclusively intended to be installed into a machine or an incomplete machine. The said product does not yet conform to all the relevant requirements defined in the Directive on Machinery referred to above for this reason.

The specific technical documents listed in Appendix VII, Part B, have been prepared. The Authorized Agent empowered to compile technical documents may submit the relevant documents if such a request has been properly justified.

Commissioning of an incomplete machine must not only carried out if it has been determined that the respective machine into which the incomplete machine is to be installed conforms to the regulations set out in the Directive on Machinery referred to above.

The above product conforms to the requirements of the directives and harmonized standards specified below:

- Directive 2014/68/EU
- DIN EN ISO 12100 Safety of machinery

Knittlingen, 21.09.2017

i.V. Uwe Heisswolf
Head of Development
